Summary

GSoC 2026 contributor with Eclipse Foundation on the SW360 Archival and Restore feature. Full-stack engineer (Java/Spring, React/TypeScript) with open-source contributions across the Eclipse Foundation (SW360, FOSSology), CNCF (Jaeger, OpenCost), and Linux Foundation (dotnet-libp2p). 400+ DSA problems on LeetCode.

Education

IIIT Jabalpur

BTech in Computer Science and Engineering

August 2023 – July 2027

St. Gabriel's Sr. Sec. School

Class XII – CBSE

March 2021 – March 2023

Skills

Languages: Java, TypeScript, JavaScript, C/C++, Python, SQL, HTML, CSS, PHP

Frameworks & Libraries: React.js, React Router, Node.js, Redux, Spring Boot, Express.js, Flask, TailwindCSS

Databases & APIs: CouchDB, MongoDB, REST APIs, Apache Thrift, JWT, OAuth2

Testing & Tooling: Jest, React Testing Library, Cypress, JUnit, Mockito, Spring Test, Biome

DevOps & Tools: Docker, Maven, Git, GitHub

Experience

Incoming GSoC 2026 Contributor - Eclipse Foundation (SW360)

May 2026 – July 2026

- Selected as 1 of 1,200 contributors globally (from 23,000+ proposals) to implement the Archival and Restore feature for Eclipse SW360, a software bill-of-materials and license compliance platform used by enterprises including Bosch, Siemens, and Toshiba.
- Designing a reversible archival workflow across 4 entity types (Projects, Components, Releases, Packages) with TAR.GZ bundle export, CouchDB removal, and a 3-step restore pipeline with conflict detection.
- Building Thrift IDL service contracts (archival.thrift) with 8+ RPC methods and a Parquet export extension via parquet-avro enabling 10x+ storage compression for long-term archival.
- Tech: Java, Apache Thrift, CouchDB, Apache Parquet, TAR.GZ, Spring, React/TypeScript**

Projects

IIITDM Jabalpur Canteen Tracker

[Link](#) 

- Full-Stack Web App using React, Node.js, MongoDB
- Built a MERN stack application solving the lack of centralized canteen menu information for campus students
- Designed RESTful APIs using Express.js with MongoDB/Mongoose schemas for canteens, menus, users, and ratings
- Implemented JWT-based authentication and role-based authorization, including hostel-specific access control

AI for Cultural Restoration – Group Project

[Github](#) 

- Python, Stable Diffusion, LoRA, PyTorch, leveraged for building an AI-driven restoration pipeline.
- Implemented a custom mask generator to realistically simulate statue damage patterns for training.
- Achieved high-quality reconstructions with PSNR > 28dB and SSIM > 0.85, ensuring visual and structural fidelity.
- Optimized model efficiency by reducing training time by 40% using LoRA fine-tuning instead of full-model retraining.

Achievements

- Runner-up at **HackByte 2.0**, a college-level hackathon.
- Contributed multiple PRs to open-source on GitHub including Eclipse SW360, FOSSology, Jaeger (CNCF), OpenCost (CNCF), OpenMS
- Solved 400+ DSA problems on LeetCode
