PROFESSIONAL SUMMARY

Web developer with a strong foundation in data structures, algorithms, and full-stack web development. Solved 300+ problems on LeetCode, GFG, and HackerRank, strengthening my problem-solving skills. Currently building responsive web apps using JavaScript, React, Node.js, and MongoDB.

EDUCATION

IIITDM Jabalpur – B.Tech in Computer Science Engineering

2023 – 2027

St. Gabriel's Higher Secondary School (CBSE) Class XII

2023

SKILLS

Languages: C/C++, Python, JavaScript, HTML, CSS, PHP, Node.js, SQL

DevOps & Tools: VS Code, Git, GitHub, Anaconda

Frameworks: React.js, Express.js, MongoDB, TailwindCSS, Flask

Strong Foundation in CS Fundamentals: DSA, DBMS, Operating Systems, and OOP Principles

PROJECTS

Restaurant Ordering & Delivery System website- [Link](#). Admin-[Link](#)

June 2025 - present

MERN Stack (MongoDB, Express.js, React.js, Node.js)

- Built a full-stack web app for restaurant ordering and delivery with role-based access for users, delivery agents, and admins.
- Developed UI with React.js and REST APIs with Node.js/Express.js
- Used MongoDB to manage users, orders, menus, and delivery status
- Created an Admin Panel for menu management, order tracking, and delivery assignments
- Enabled real-time order updates

Osseointegration Simulation System [Github](#)

Feb 2025

Python • VPython • Tkinter • Flask • Matplotlib • Plotly

- Built a 3D interactive simulation of osseointegration, modeling osteoblast migration and bone modulus evolution over 24 months
- Used VPython for real-time visualization of cell movement and bone growth
- Designed a Tkinter GUI to display live graphs for osteoblast activity and bone formation
- Integrated a Flask-based web interface for user-driven simulation input
- Generated diverse outputs: line graphs, histograms, heatmaps, bar charts, and interactive 3D plots with Matplotlib and Plotly
- Conducted 100+ simulation runs for sensitivity analysis and correlation between biological/material factors and healing outcomes
- Simulated the impact of patient and implant parameters (age, health, surface texture, etc.) on bone healing

Cover Letter generator [Link](#)

April 2025

Flask • HTML/CSS/JS • Cohere AI

- Built with a Flask backend, supporting form handling, input validation, and DOCX export
- Designed a clean, responsive UI using HTML, CSS, and JavaScript
- Achieved 90%+ tone/style accuracy through iterative prompt engineering
- Helped users reduce manual writing time by 80%

INTERESTS & OUTLOOK

- Open Source Enthusiast: Exploring collaborative development and building meaningful tech
- Lifelong Learner: Continuously exploring new tools, frameworks, and real-world problem solving
